

DATA ANALYTICS PROCESS

(Application in real life scenario case study)

Title: Buying a skin care product using data analytics process

Description: I've chosen this particular topic "buying a skin care product" is because as I personally buy and go through all the process in real life before investing & choosing the right product

Let's just make you understand how the process goes through various stages using data analytics process

Step 1: Plan: let's say I want to buy a skincare product, in order to invest on right product, I need to plan what kind of product do I want, how much I'm going to invest, how it is more beneficial than others etc. & also go through all different categories involved such as cost, brand, ratings, ingredients and so on

Step 2: Prepare: Now in order to buy an ideal product accordingly I need to be prepared with all the concerns which includes choosing a right product according to my skin concern, comparing pro's & con's, budget, & reviews etc...

Step 3: Process: Now the main task starts here, if I made my whole list what's my ideal needs in a product, after going through various requirements then, I might be good to go to choosing the right quality of product

Step 4: Analyse: Now if I finally decided what to buy, after choosing a particular product I should be able to analyse all the ingredients used in a product, should be able to analyse if it suits my skin type, should know if it's dermatologically tested or not etc....

Step 5: Share: After analysing the data required, it's my basic instinct to know about product through people who've been already used, know their reviews and experiences and also my definite thing is to consult my dermat about this product, if my dermat approves I'm good to go

Step 6: Act: Finally buying a skincare product according to my concern, hoping it to work out really well and have the best results
